

Practical IoC With MVC 4

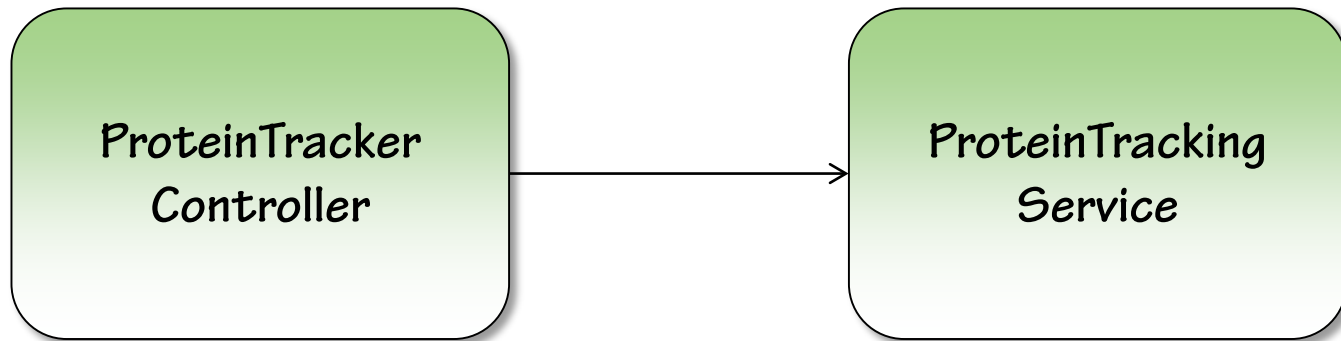

Doing It Yourself

John Sonmez

The Problem

1. Can't easily swap out a different protein tracking service
2. Need to be able to provide a "mock" or "stub" for unit testing
3. Want to be able to insulate controller from service changes

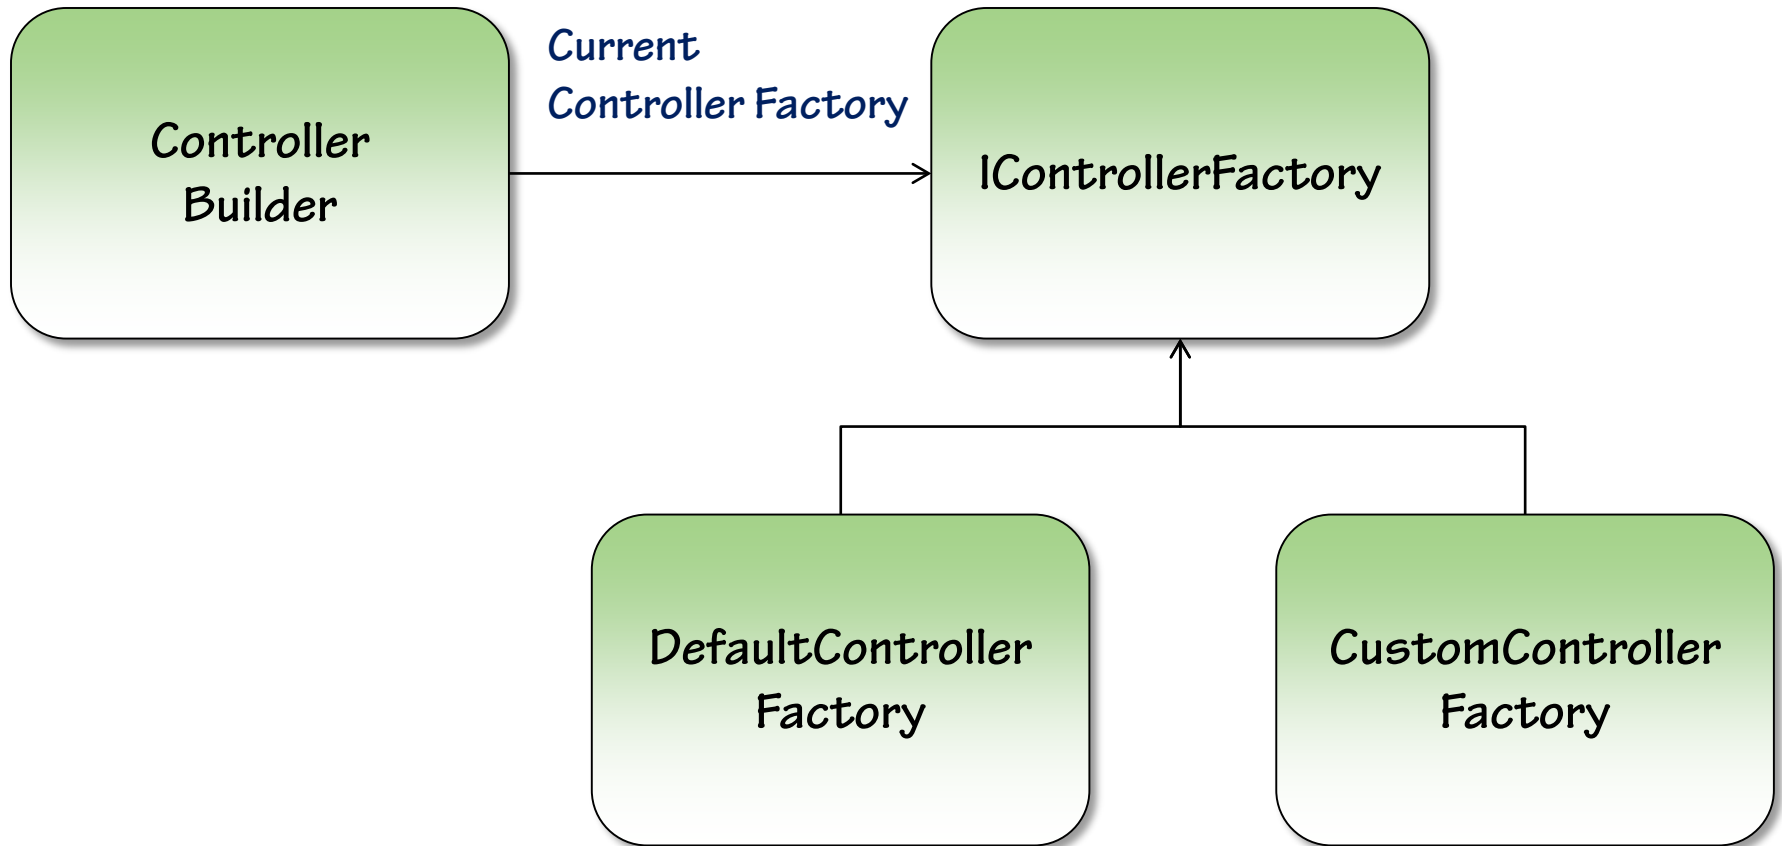

Our code is currently tightly coupled

The Solution

First we implement inversion of control

Controller Factories

MVC allows us to set the currently used controller factory

Up Next

We'll be learning how to inject our dependencies using Unity
